the European Union

About DHC Academy

Green and digital skills for smart district heating and cooling networks

The DHC Academy is an **Erasmus+ Alliances for Innovation** project aimed at equipping professionals with the green and digital skills needed to support the sustainable transition of the heating and cooling sector

Challenge

District heating and cooling is a key solution for the energy transition, and its growth requires a skilled workforce. The DHC Academy addresses this by training new talent and upskilling existing professionals. Our systemic approach to capacity building ensures the training is positioned at the right level to meet sector needs.

Objectives

- Build a long-term collaborative **alliance**
- Strengthen **knowledge exchange** between education and industry
- Launch an innovative **digital learning platform**
- Develop a comprehensive **training catalogue**
- Promote **DHC careers** and industry-education cooperation

About DHC Winter School

Train the trainers

A new DHC Winter School is one of the DHC Academy activities, targeting **trainers in VET programmes**, which will be used to exchange experiences and best teaching methods, as well as to test and refine the courses piloted as detailed below.

Start at home - Building efficiency taskforce

Reducing system temperature in heat networks

Monitoring and maintenance of heat networks

The business case for decarbonising heating

Co-funded by
the European Union
